MEMO

TO: MUTUAL PRESIDENTS
FROM: MUTUAL ADMINISTRATION DEPARTMENT
SUBJECT: ID CARD REPLACEMENT PICK-UP
DATE: SEPTEMBER 13, 2017
CC:

The ID Card Replacmenet Project was completed on July 15, 2017.

What now? Next Step? Delivery of ID cards for homebound shareholders?

At the August 3, 2017 President's Council meeting a list with the remainder of ID card's that require distribution was provided to each Mutual President.

Each mutual should review the list and advise the shareholders accordingly to pick up their ID card's from the Stock Transfer Officer.

However, for shareholders that are unable to make it to the Stock Transfer Office the Mutual President can send a director to pick-up the ID cards and deliver it to the shareholder's home. The Mutual President must advise Stock Transfer Office prior to the assigned director picks up the ID cards.

The ID Card sign sheet will be used to track the Pick-up of ID Cards, Drop-off of ID Cards and the Return of ID Cards. This will allow staff and the mutual to keep an account of the ID's released to the Directors.

ID Cards that are returned will be shredded. In addition, ID cards belong to deceased shareholders will also be shredded once it has been confirmed that shareholder is deceased.

On or around September an updated list will be provided with ID's cards that still require pick-up.

Seismic Survey 2017
Leisure World
Project Description

General Overview

Geologic mapping is a highly-interpretive, scientific process which produces a range of map products for many different uses. A key component in the construction of geologic maps is the acquisition of seismic data. Data created by this project will allow for scientific studies on the behavior of geological strata in the area. This data plays an important role in creating a clear picture of the subsurface. The density of sensors (nodes) will also allow us to look at the mircroseismicity on how deformation is taking place on a small-scale and how it changes with time.

This particular project, 'Seismic Survey 2017' is being performed over a larger area than any previous subsurface geological surveys in the LA Basin. The Survey Area will encompass a large portion of Long Beach, Seal Beach, Rossmoor, Los Alamitos and the Seal Beach Naval Weapons Station.

Breakthroughs in technology have revolutionized the analysis of the data to make this map the clearest picture ever made in this very important area of the LA Basin.

How is the Survey Performed?

Imaging of subsurface strata is accomplished by using state of the art technology to input acoustical energy into the ground by using specialized trucks and very sensitive passive wireless GPS listening devices called nodes. Nodes record the reflections of sound bouncing off layers of rock strata. The recorded data is downloaded and processed by highly-dimensional image of the earth's layers.

Small holes about 8 inches in diameter by 11 inches in depth are dug, in which the nodes are buried to record data; in fact, they cannot be seen at all during operations. The nodes are completely passive and emit no energy. They strictly record and store data. Upon project completion, the nodes are removed, and any disturbed areas will be restored to their previous condition or better. Survey trucks are used during this project to create a minor surface vibration which will emit acoustical energy into the ground. The energy levels are very similar to recycling trucks. Technicians monitor surface ground vibration levels with digital recording meters at every location. Survey trucks will be at any one location between 3 and 5 minutes.

Leisure World Request

LA Seismic is requesting permission from the Leisure World Master Association and the 16 Mutuals to place the nodes in Leisure World common areas. More detailed information will be presenteed by LA Seismic at the September 7, 2017 meeting
